Features

The U4T100 and U4T140 are 4k (4 wire) production toolboxes that will ease the challenges of a 4 wire production setup where the left top corner (channel A) is used to carry VANC and HANC data like timecode and embedded audio

The I/O is capable of handling four times 1080p formatted as level A, level B or 2Si (two sample interleaved)

The '140' has an extra Dolby E encoder and decoder on board and will be capable of handling these signals internally. A quad speed audio bus can be used for additional Dolby E processing or other audio processing by using an ADD-ON card like the DEE28

- Extreme low intrinsic latency of 5 lines
- 4 inputs
 - Separate internal processing channels
 - input autophasers
 - Framesyncs and offset delay blocks controllable in two stages (LeftTop+rest)
- 4 outputs
- RGB color correction of all 4 processing channels as one
- 4K 4 wire (3840 x 2160)
- Level A,B and 2Si compliant
- Compatible with the following formats
 - 1080p59.94
 - 1080p50
 - 1080i59.94
 - 1080i50
 - 720p59.94
 - 720p50
- Transparent for 16 channels of embedded audio in first quadrant
- Full control and status monitoring through the front panel of the SFR04/SFR08/SFR18 frame and the Ethernet port (ACP)

Applications

- All 4k 4 wire challenges
- Synchronization
- Auto phasing
- embedding and de-embedding from left top channel
- Encoding and decoding to and from Dolby E embedded data
- 4 wire synchronization and alignment
- Color correction
- Level A to level B or to 2Si conversion in any direction.
